

Environmental Policy

SAFEgroup is committed to continuous improvement of the Environmental Management System to effectively monitor the use of natural resources, both renewable and non-renewable across our operations, and maximise the efficiency and effectiveness with which they are used, with a clear view of minimising environmental impacts.

All documentation and processes are underpinned by **AS/NZS ISO 14001:2004 Environmental Management Systems - requirements with guidance for use**, as well as compliance to relevant local government, state and federal statutory, legislative and regulatory requirements.

A culture of environmental awareness and management at **SAFEgroup** is achieved by:

- Awareness of the **SAFEgroup** Environmental Management System by all workers, including clauses in supply conditions and contracts outlining the requirements for compliance to the **SAFEgroup** Environmental Management Plan;
- The setting of target and objectives for continuous improvement to enable measurement of environmental performance;
- Trained workers and appropriate equipment to handle any environmental emergency that could possibly occur on **SAFEgroup** premises;
- Liaison with local government authorities to ensure that we meet requirements for the prevention of pollution and effective waste management;
- The provision of adequate resources to enable proactive planning and implementation of activities designed to eliminate the incidence of pollution;
- Proactive management of chemical and hazardous substances to eliminate the potential of pollution within areas of control by **SAFEgroup**; and
- Review of the Environmental Management System, actions and outcomes by Senior Management and regular monitoring of the system to ensure compliance.
